

ChartMate

Technical Analysis Mentorship Program

First You LEARN, Then Remove 'L'

Introduction

ChartMate is a stock market training institute based in Maninagar, Ahmedabad, dedicated to helping aspiring traders build practical knowledge, confidence, and the right approach to the markets.

With 700+ students already trained and actively trading, we focus on simplifying stock market concepts and teaching students how to understand charts, market movements, technical analysis, and trading strategies in a practical way.

At ChartMate, our goal is not just to teach students what to trade, but to help them understand why and how the market moves so they can make more informed trading decisions.

We provide quality stock market education that helps learners build a strong understanding of financial markets, from essential concepts and the Indian market to advanced trading knowledge.

- **Basics of Share Market**
- **What is Indian Market?**
- **Advance Future & Option**
- **Equity Market**
- **Commodity & Forex Market**
- **Software Training**

What We Provide

What Is Technical Analysis

Technical analysis is a powerful approach to understanding and evaluating market movements by studying historical price action, volume, trends, patterns, and other market data. It helps traders identify potential opportunities, understand market behaviour, and make more informed decisions based on structured analysis rather than guesswork. At ChartMate, we focus on making technical analysis practical, easy to understand, and applicable to real-world trading.

Pattern & Indicator Driven

Technical analysis uses charts, price patterns, and technical indicators to interpret market behaviour. Tools such as support and resistance, moving averages, momentum indicators, and chart patterns help traders make structured decisions.

Price & Volume Focus

Technical analysis primarily studies price movements and trading volume. By examining historical data, traders can understand how an asset has behaved and identify patterns that may provide clues about future price movements.

Trend-Based Analysis

A key property of technical analysis is identifying market trends whether prices are moving upward, downward, or sideways. Understanding trends helps traders determine potential entry and exit opportunities and align their trades with the broader market direction.
